OBJECTIVE

Final-year Electrical Engineering student at MNIT Jaipur with hands-on experience in full-stack development, NLP, and RAG-based AI systems. Passionate about building practical AI-powered tools — especially in data-intensive domains like financial services. Seeking an Applied AI internship where I can design, prototype, and iterate on LLM-driven products that solve real industry problems.

EDUCATION

Malaviya National Institute of Technology (MNIT Jaipur)

B.Tech in Electrical Engineering — CGPA 7.58

2022 – 2026
Jaipur, Rajasthan

Maheshwari Public School

12th — CBSE, 84.8%

2020 – 2021
Kota, Rajasthan

EXPERIENCE

JP Morgan Chase & Co.

Risk Analyst Intern

Jul 2025 – Dec 2025
Bangalore, Karnataka

- Built SQL-based analytical workflows to identify risk trends across structured financial datasets, directly supporting risk reporting and decision-making pipelines.
- Worked with SAS Viya and MS Excel to automate data exploration tasks, reducing manual reporting effort across the analytics team.
- Collaborated with cross-functional stakeholders to translate business requirements into data queries and dashboards.

PROJECTS

DocMind — Personal AI Document Assistant | 20-Day Solo RAG/ML Learning Project

React · FastAPI · ChromaDB · LangChain · Python · HuggingFace · BERTopic · SQLite

- Built an end-to-end Retrieval-Augmented Generation (RAG) system that lets users upload documents and query them via a conversational AI interface, using ChromaDB for vector storage and LangChain for orchestration.
- Implemented LLM chat with streaming (SSE), prompt engineering, and citation-aware responses — users can trace every AI answer back to the exact document source.
- Integrated NLP analytics layer using BERTopic for topic modelling, Named Entity Recognition, and auto-summarization across uploaded document sets.
- Deployed full-stack app (React frontend + FastAPI backend) to Vercel and Railway with CI/CD pipeline and environment variable management.

Study Productivity Tracking System | Full-Stack Web Application

React · Node.js · Express.js · MongoDB · REST APIs

- Designed and developed a MERN-stack app to track daily study sessions and subject-wise time allocation, with an interactive React dashboard for visualizing productivity trends.
- Implemented RESTful APIs for activity logging, data retrieval, and analytics aggregation.

Sentiment Analysis Web Application | NLP Web App

Python · Flask · HuggingFace Transformers · REST API

- Built a real-time text sentiment classifier using a pre-trained transformer model, served via a Flask API with an interactive web interface for live classification and confidence scoring.

TECHNICAL SKILLS

AI / ML: LangChain, ChromaDB, HuggingFace Transformers, BERTopic, RAG, Embeddings, Prompt Engineering

Languages: Python, JavaScript, C++, SQL, Java

Frontend: React.js, HTML, CSS

Backend: Node.js, Express.js, FastAPI, Flask, REST APIs

Databases: MongoDB, MySQL, SQLite, ChromaDB

Developer Tools: Git, GitHub, SAS Viya, MS Excel, Railway, Vercel

Core Concepts: Data Structures & Algorithms, OOP, RAG Systems, NLP Pipelines

CERTIFICATIONS

- 100 Days of Code: The Complete Python Pro Bootcamp — Dr. Angela Yu, Udemy
- The Complete Full-Stack Web Development Bootcamp — Udemy
- Mastering Data Structures & Algorithms using C and C++ — Abdul Bari, Udemy
